## Project Design Phase-II Solution Requirements (Functional & Non-functional)

Date	18 October 2022
Team ID	PNT2022TMID23959
Project Name Project - University Admit Eligibility Predicto	
Maximum Marks	4 Marks

## **Functional Requirements:**

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)	
FR-1	User Registration	Registration through Form	
		Registration through Gmail	
		Registration through LinkedIN	
FR-2	User Confirmation	Confirmation via Email	
		Confirmation via OTP	
FR-3	User Login	Login through username and password	
		Login through Gmail	
		Login through LinkedIN	
FR-4	Administration work	Check qualified candidate detail	
		Make allotment	
FR-5	Admission Details	Check seat availability Check	
		college infrastructure Check	
		fees details	
FR-6	Local counsellor	Issue the final allotment order	

## Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR	Non-Functional Requirement	Description	
NFR-	Usability	i. A logical interface is essential to make easy use of	
1	-	system, speeding up common tasks.	
		ii. The product could be used by two	
		categories of people mainly administrator category	
		and other users.	

NFR-	Security	Some of the factors that are identified to protect the	
2		software from accidental or malicious access, use,	
		modification, destruction, or disclosure are described	
		below:	
		. Keep specific log or history data sets.	
		ii. Utilize certain cryptographic techniques.	
		iii. Restrict the no of systems that can	
		access the online admission system site. This could	
		be done only by registering the systems physical	

		before using them for online admission process.  iv. Check data integrity for critical variables.  v. Every user should be licensed to use the system under any of the four categories provided i.e. either verifier or advisor or local counsellor
NFR-3	Reliability	<ul><li>i. All data storage for user variables will be committed to the database at the time of entry.</li><li>ii. Data corruption is</li></ul>
NFR-4	Performance	i. The database should be able to accommodate a minimum of 10,000 records of students. ii. At any instant the system should support use of multiple users at a time. iii. Availability results of the requested college should be presented to the student in max of two seconds, so retrieving of data should
NFR-5	Availability	The system should available at all the time meaning that the user can access easily. Increase of the hardware and data base failure a replacement page will be show and for database back
NFR-6	Scalability	Assesses the highest workloads under which the system will still meet the performance Deals with the measure of the system's response time under different load conditions requirements. Example:  The system must be scalable enough to support 1,000,000 visits at the same
